MARINE COMPOSITES SL

HIGH QUALITY PRE-PREGNATED CARBON FIBRE PLATE

Our plates are constructed from Lloyds approved sprint ST70 with a toughened epoxy resin system making it ideal for all types of localized reinforcements, backing plates for hardware and structural panels. The plates can be pressed to autoclave equivalent pressures; and cured at 120 degree Celsius giving a TG of 120. This procedure gives exceptional strength, stiffness and quality.

If required the plates can be constructed using all types of foam core, or faced with cosmetic carbon for a superior finish making it ideal for helm station consoles, switch boards and control panels. We also offer the option to water jet cut any shape through any thickness of plate with extremely high precision and CNC engraving for all types of control panels.

STANDARD PLATE SIZE	
Thickness in mm	Price in €
1 mm	310.00
2 mm	435.00
3 mm	560.00
4 mm	685.00
5 mm	810.00
6 mm	935.00
7 mm	1,060.00
8 mm	1,185.00
9 mm	1,310.00
10 mm	1,335.00
11 mm	1,460.00
12 mm	1,585.00

*All prices exclude IVA
Prices based on standard 1000mm²,
although our press bed can take a plate upto 1200mm x 2900mm*

Other Options:

- Cosmetic clear coat finishing with extremely durable heat cured polyurethane
- Maximum single plate size 1100mm x 2700mm
- Water jet cutting accuracy = 0.1mm tolerance
